The screenshot shows the GitHub repository for Kubernetes. At the top, it displays the repository name 'kubernetes / kubernetes' with statistics: 3.3k Watch, 73.6k Star, and 26.6k Fork. Below this are navigation tabs for Code, Issues (1.9k), Pull requests (919), Actions, Projects (6), Security, and Insights. The main content area shows the 'master' branch with 43 branches and 757 tags. A file tree is visible, listing directories like .github, CHANGELOG, LICENSES, api, build, cluster, cmd, docs, hack, logo, pkg, plugin, staging, and test, each with a description of the latest commit and its age. On the right side, there is an 'About' section describing it as 'Production-Grade Container Scheduling and Management', a link to 'kubernetes.io', a 'Readme' link, and the 'Apache-2.0 License'. Below that is a 'Releases' section showing 'Kubernetes v1.20.2' as the latest release from 5 days ago, with a link to '+ 756 releases'. At the bottom right, there is a 'Contributors' section showing 2,985 contributors with profile pictures.

The screenshot shows the Terraform Registry page for the `aws-eks` module. The header is blue with the Terraform logo, a search bar, and navigation links for 'Browse', 'Publish', and 'Sign-in'. The main content area has a white background. On the left, the 'aws' logo is displayed above the module name 'eks' and 'AWS'. A dropdown menu shows 'Version 13.2.1 (latest)'. The description reads: 'Terraform module to create an Elastic Kubernetes (EKS) cluster and associated worker instances on AWS'. Below this, it states 'Published November 12, 2020 by terraform-aws-modules', 'Module managed by brandoconnor', 'Total provisions: 2.7M', and 'Source Code: github.com/terraform-aws-modules/terraform-aws-eks (report an issue)'. There are buttons for 'Submodules' and 'Examples'. At the bottom, there are links for 'Readme', 'Inputs (61)', 'Outputs (34)', 'Dependencies (6)', and 'Resources (42)'. On the right, a 'Provision Instructions' box contains a code snippet for configuring the module in a Terraform configuration file.

Version 13.2.1 (latest) ▾

Terraform module to create an Elastic Kubernetes (EKS) cluster and associated worker instances on AWS

Published November 12, 2020 by [terraform-aws-modules](#)
Module managed by [brandoconnor](#)
Total provisions: 2.7M
Source Code: github.com/terraform-aws-modules/terraform-aws-eks (report an issue)

[Submodules](#) ▾ [Examples](#) ▾

[Readme](#) [Inputs \(61\)](#) [Outputs \(34\)](#) [Dependencies \(6\)](#) [Resources \(42\)](#)

Provision Instructions
Copy and paste into your Terraform configuration, insert the variables, and run `terraform init` :

```
module "eks" {
  source = "terraform-aws-modules/eks/aws"
  version = "13.2.1"
  # insert the 7 required variables here
}
```

terraform-aws-eks
